

## GALAPAGOS FOR PHOTOGRAPHY ENTHUSIASTS

WITH AWARD-WINNING NATURE PHOTOGRAPHER JONATHAN GREEN

This is a unique opportunity to see and photograph the Galapagos, both above water and underwater with the guidance and care of experts in the field; a fascinating destination where your hardest decision will be where to point your camera first... Exceptional days in the islands, with rewarding locations within the itinerary, will also include photography workshops, presentations, and the use of modern photo-techniques. In the evenings, indulge in great dinners and cozy accommodations.

As you learn, apply in the field your new techniques in different approaches to landscape and wide angle, macro and portrait photography, using the unique light

conditions only found in the Galapagos Islands. Mr.Green will permanently coach guests in both land and underwater photography, and since the walking pace of photographers is different to that of non photography groups, extended time periods will be scheduled for key species and "hotspots" along the trails.

A major plus will be the added opportunity to photograph Ecuador's Andean Volcanoes and the city of Quito, a UNESCO World Heritage Site and a jewel of Colonial art and architecture. This is photography at its best.

**Photo Expedition Special Departures: April 4 to 13, 2010 | July 11 to 20 2010!**

**About Nature Photographer Jonathan Green:** Jonathan, a resident of Ecuador, has been studying and photographing the Galapagos Islands, their flora and fauna on land and underwater, for over 20 years. Four times finalist in the Wildlife Photographer of the Year competition. Bronze medalist at Hasselblad World Circuit 2000. Photos published in Time, Time Life, Time for Kids, GEO, BBC Natural History and Royal Geographical Magazines. Photography exhibited at the Natural History Museum of London, Olympia Stadium, London and assorted venues around the world.
